

LET IT RAIN.

eFlex ES PREMIUM
SLURRY SEAL

From driving rain to freezing cold to sweltering heat, this highly modified slurry system strengthens your defense against harsh weather and equipment, while providing a long-lasting, high-friction surface for additional safety.

The highly cohesive mixture in eFlex ES is far more durable than conventional and modified slurry seals, providing increased resistance to scuffing and tearing early on, and long-term protection from extreme temperatures and utility vehicles.

Increased Resistance, Long-Term Protection.

eFlex ES is a premium slurry seal with a unique design process for enhanced performance on residential streets, cul-de-sacs, city arterials and collectors. Its high level of polymer modification provides improved durability over conventional and modified slurry seals.

DESIGNED FOR RESIDENTIAL APPLICATION

eFlex ES can be applied using Type I, II and III aggregate and has a quick set time, making it ideal for residential applications.

INCREASED RESISTANCE

A high level of polymer modification in our premium slurry seal provides increased resistance to damage caused by UV exposure and scuffing that can occur early after application of other slurry seal treatments.

LASTING RESULTS

eFlex ES is designed to help roads withstand oxidation and utility vehicles, such as snowplows, long after application, while providing a long-lasting high-friction surface for additional safety.

Our premium slurry seal is an evolutionary product that provides improvements to both short- and long-term benefits agencies desire in a slurry seal application.

"[eFlex ES] is tougher and provides a longer life span. Applying the material is easy and requires no extra effort on our part."
