

# READY TO CLEAN UP YOUR ACT?

**eTac HB** HOT-APPLIED  
BOND COAT

Track Performance, Not Material.

Ergon's eTac HB is a hot-applied bond coat that can be applied at normal-to-high shot rates. It's trackless, so it keeps equipment clean and improves production. Crews spend less time on cleanup, and more time focused on the job at hand.

How's that for improving your track record?

 **Ergon Asphalt  
& Emulsions, Inc.**

# Trackless In Seconds.

eTac HB is Ergon's hot-applied bond coat with properties that allow for cleaner, faster applications and provide exceptional bond strength.

## TRACKLESS

Because eTac HB is trackless, construction crews can spend more time paving and less time cleaning equipment.

## HIGH SHOT RATES

This trackless bond coat is suitable for specialty applications requiring high shot rates, including open-graded friction course surfacing.

## STRONG BOND, INCREASED SAFETY

A strong bonding agent, eTac HB helps keep asphalt from slipping and sliding, enhancing the structure of the pavement and increasing public safety.

eTac HB can be applied at lower temperatures than typical hot bond coats, increasing the safety of the construction crew and eliminating the need for specialized equipment.
