

UPGRADE YOUR ROAD STRUCTURE With Full Depth Reclamation.

Full Depth Reclamation with Ergon's conventional or engineered emulsions ensures a stronger, more flexible road base able to withstand heavy traffic and varying weather conditions. This treatment builds pavement strength, adds moisture resistance and allows for same-day return to traffic.

Full Depth Reclamation with Asphalt Emulsion

Create A Stronger Road Base.

Full Depth Reclamation (FDR) is a process in which your existing pavement is mixed with asphalt emulsion and reused to create a stronger, more flexible road base. This results in an improved structure that can withstand high volume traffic and harsh conditions. Ergon Asphalt & Emulsions offers conventional and engineered emulsions for the FDR process that improve moisture resistance, provide a smooth ride quality and reduce overall maintenance costs.

BUILD PAVEMENT STRENGTH

Ergon's FDR emulsions are stabilizing agents that are mixed with your existing pavement to create a more durable, structurally sound road base.

IMPROVE MOISTURE RESISTANCE

FDR with asphalt emulsion improves resistance to thermal cracking and moisture damage, strengthening and extending the life of your pavement.

SAME-DAY RETURN TO TRAFFIC

Roads that undergo the FDR process can typically withstand same-day return to traffic while maintaining a strong bond.

FDR can be used in a variety of applications, from highways to isolated service roads.
