

Sealing Shoulders for Safety

eSeal® HIGH-PERFORMANCE
SURFACE SEAL

Shoulders are the buffer zone that help protect the road and its drivers. Make the most of your budget and improve driver safety at the same time with Ergon eSeal – the innovative solution to sustainable shoulders.

ERGON®

Safer Roads Ahead

Shoulder maintenance can be costly, but stopping deterioration of the shoulder is crucial to help preserve the road and ensure a safe recovery for drifting vehicles. Cost-effective eSeal revitalizes asphalt shoulders, slowing the natural processes that lead to deterioration. The rich black color also helps drivers focus on the path ahead and improves the overall aesthetic of the roadway.

- Protects against sun, moisture, salt and chemicals
- Resists wear from vehicle tires
- Extends pavement life by 3 to 5 years
- Can be customized

Ask your Ergon representative how eSeal can help your team stay on top of shoulder maintenance.

eSeal

Meets ASTM D2486 industry standard for wear resistance.

Contains specially selected fine aggregate that resists breaking down.

Meets other relevant specifications for evaporation, viscosity, density and more.

Ask your Ergon representative for more information on specifications and installation.
